Institutional Communication Offices of Mincom and LACETEL

The Telecommunications Research and Development Institute (LACETEL), with the collaboration of the Information Technology and Communications Business Group (GEIC), on July 1st, launched the Call for the VII Annual Conference on Information Technologies, Multimedia and Telecommunications, ACIMUTT 22, which will be held in virtual mode, from November 1st to 3rd.

Researchers, engineers and specialists in telecommunications, electronics and software may participate with papers on solutions for telecommunications systems; the design of planning, monitoring and optimization tools.

The program includes keynote lectures by prestigious guests and oral presentations of the papers approved by the Scientific Committee with spaces for exchange on the topics presented.

The main themes of the lectures will be related to topics related to solutions for telecommunication systems. Applications of AI to telecommunication systems. Radio spectrum optimization. Wireless technologies, mobile networks. Digital Television. Information and Communications Technologies (ICT). Cloud Computing, as well as Computer Security.

For those interested in participating with a paper, the Organizing Committee informs that the reception of abstracts is still open. Please find attached the Call for Papers for consultation or download.
